EE24BTECH11005 - Arjun Pavanje

Question:

The coordinates of the point P dividing the line segment joining the point $A(1, 3)$ and $B(4, 6)$ in the ratio 2:1 are (10, 2012)

Solution:

Variable	Description
P	Point to be found
A	(1, 3) point
B	(4, 6) point
k	ratio in which P divides AB

TABLE I: Variables Used

If P divides AB in the ratio $k : 1$,

$$P = \frac{kB + A}{k + 1} \quad (1)$$

$$P = \frac{\begin{pmatrix} 4k + 1 \\ 6k + 3 \end{pmatrix}}{k + 1} \quad (2)$$

here, $k = 2$, so putting the k we get

$$P = \begin{pmatrix} 3 \\ 5 \end{pmatrix} \quad (3)$$

The coordinates of the required point P are

$$\begin{pmatrix} 3 \\ 5 \end{pmatrix} \quad (4)$$
