## EE24BTECH11005 - Arjun Pavanje

## **Question:**

The coordinates of the point P dividing the line segment joining the point A(1,3) and B(4,6) in the ratio 2:1 are (10, 2012)

## **Solution:**

Variable	Description
P	Point to be found
A	(1, 3) point
В	(4, 6) point
k	ratio in which P divides AB

TABLE I: Variables Used

If P divides AB in the ratio k:1,

$$P = \frac{kB + A}{k + 1} \tag{1}$$

$$P = \frac{\binom{4k+1}{6k+3}}{k+1} \tag{2}$$

here, k = 2, so putting the k we get

$$P = \begin{pmatrix} 3 \\ 5 \end{pmatrix} \tag{3}$$

The coordinates of the required point P are

$$\begin{pmatrix} 3 \\ 5 \end{pmatrix} \tag{4}$$
